

## Adding Tools for Building a New World

Rob Sayre  
November 19, 2018

One assumption suggested by the Divine Principle and Rev. and Mrs. Sun Myung Moon's theology is that applying the fundamental lessons and tools for the individual and family to ever-larger spheres will produce similar results as can occur on the individual and family levels.

It is my experience and belief that we also need improved tools to build successful extended families, tribes, communities, nations, and a world of peace.

This article discusses a few tools and provides a cursory overview that can aid in building a culture

and communities centered upon God. It builds upon my previous article, "Converting Good Intentions into Results." The tools discussed were used in the development of the Shehaqua Ministries.

First, some introductory quotes on leadership and the family as the cornerstone of society:

"The man of perfect virtue, wishing to be established himself, seeks also to establish others; wishing to be enlarged himself, he seeks also to enlarge others." *Analects 6.28*(Confucianism)

"The Way lies at hand yet it is sought afar off, the thing lies in the easy yet it is sought in the difficult. If only everyone loved his parents and treated his elders with deference, the Empire would be at peace." *Mencius IVA* (Confucianism)

Rob Sayre

"Family education determines the future destiny of the entire nation. When there are many families living by the principle of public service, the nation will flourish; when there are many families living with a private standard, the nation will perish." (31:243) Rev. Sun Myung Moon, June 4, 1970

### Do Good and Righteous People Create Good and Effective Organizations?

The simple answer is: not necessarily. It's true that without a quorum of righteous people in any community, organization or nation, creating a good society is a tough slog. New tools, however, make the job easier and more people can be involved in the effort.

The tools of Cain-Abel relationships, leadership and governance rooted in biblical stories and Confucian thought applied to the individual, family, and extended family provide valuable insights into Western culture and indeed the world.

When you start applying these to larger societal and organizational structures, they produce unintended consequences. They tend to produce centralized decision-making and hierarchical governance, which at the family and extended family level are effective, while on these larger levels they are not.

We also need tools from the West and other thought leaders such as John Maxwell. In one of his seminal books, *Developing Leaders Around You*, he outlines why developing new leaders is the most important job of any leader and how to go about that. In it, Maxwell outlines the criteria to look for in a leader and how to foster a climate conducive to developing new leaders.

### Criteria for New Leaders

- Evident gifts and strengths
- A proven track record
- Confidence
- Self-discipline
- Effective communication skills
- Discontent with status quo

The larger UM has often used its “leadership” development process as a mode of personal development, or learn by doing, and promoting those that unite with the direction, even if the intended results are not achieved. Evident gifts and strengths and self-discipline are valued, while the others are not. At Shehaqua, we were dependent on volunteers to man and lead all our programs. Our programs were very similar each year, but who participated changed. I likened it to having a set musical score, but different people playing the various instruments. Recruiting leaders with confidence, effective communication skills and people who could think on their feet as changes and problems arose was essential. Reading Maxwell helped.

### Creating a Climate for New Leaders

- Show a positive attitude
- Create momentum — encourage people to accomplish big things
- Create opportunities for personal development within the larger goals
- Focus on getting things done, not title or position
- Do big things

Creating opportunities for personal development and focus on getting things done have rarely been seen as a priority. At Shehaqua we tried to provide mentors and clear job descriptions for every role. This helped create a climate more conducive to people taking on larger roles over time or just changing them as their ambition or life circumstances changed. We tried to honor these requests and changes. This also helped in succession of leadership, as roles were more clearly defined.

But even when you are developing new leaders, you also need processes or ways that the organization itself learns, conveys its culture and goals that allow the core mission to succeed beyond one generation of leaders. If you are dealing with more than 150 people (see Dunbar’s number), you need organizational tools.

For this, I look to Peter Senge from MIT. In his book, *The Fifth Discipline*, he shares this story:

“The Wright brothers proved that powered flight was possible, but the [McDonnell] Douglas DC-3, introduced in 1935, ushered in the era of commercial air travel. The DC-3 for the first time brought together five critical component technologies that formed a successful ensemble. They were: the variable-pitch propeller, retractable-landing gear, a type of lightweight molded body construction called ‘monocoque,’ a radial air-cooled engine, and wing flaps. To succeed, the DC-3 needed all five components; four were not enough. One year earlier, the Boeing 247 was introduced with all of them except the wing flaps. Boeing’s engineers found that the plane, lacking wing flaps, was unstable on takeoff and landing, and they had to downsize the engine.”

The DC-3 needed all the components to fly and to create commercially viable “flight” for the masses. Discovering the Divine Principle and its applications is similar to the Wright brothers discovering flight. To build upon the Confucian foundation and that of Father and Mother Moon and others, we need new tools from thought leaders such as Maxwell, Senge, and management expert Peter Drucker (e.g., his SMART goals).

Below is a distillation of some of Senge’s key thoughts. Senge focuses upon how to create an organization that learns:

### **Systems Thinking**

“Systems thinking is a conceptual framework, a body of knowledge and tools that has been developed over the last fifty years, to make full patterns clearer, and to help us see how to change them effectively.” (Senge)

The Divine Principle, from the point of view of religious thought, is a conceptual framework. Viewing history as a process of restoring the position of men and women to their original state is a systems viewpoint. At Shehaqua, the systems thinking I read from Senge allowed me to see all the factors that went into our program and how they interacted with each other. The facilities, the people, our finances, marketing, and the specific personalities involved in each program could all be seen as a kind of quilt, woven together.

What Senge adds is a methodology for thinking about any organization, a culture, and a nation, that is not religion-based but is a tool that allows one to analyze and improve these. We keep thinking that if only we had better, more effective techniques, followed up after sponsored events and better marketing, our results would change. Certainly those are valid, but as important as they are, the insight Senge brings to the organizational development viewpoint is helping people within to see how their framework fits together.

The DC-3 is a good example of this. The revolution of flight, demonstrated by the Wright brothers, did not bring about the application of use. In the same way, the discovery and initial application of the Divine Principle has not brought about the intended change in modern culture. Without creating a “learning organization” and using more effective tools, I do not think it will.

### **Mental Models**

“Mental models are deeply ingrained assumptions, generalizations, or even pictures or images that influence how we understand the world and how we take action. Very often, we are not consciously aware of our mental models or the effects we have on our behavior.” (Senge)

Mental models can limit or expand our vision and ways of acting. Understanding how our mental models do this is what Senge adds. For instance, trying to apply the insightful story of the Cain/Abel paradigm and subject/object relationship to everything from personal relationships to family dynamics to national policies and world history often inhibits our decision-making and leads to unforeseen problems. Cain as a representative person and position had certain expectations as did Abel. These lessons are valid. When you start applying them to “Abel and Cain nations” the lessons are lost. Can a nation be humble or arrogant? If they can, how do you know when they have changed?

### **Personal Mastery**

“Personal mastery is the discipline of continually clarifying and deepening our personal vision, of focusing our energies, of developing patience, and of seeing reality objectively. As such it is the cornerstone of the learning organization.” (Senge)

*Hoon dok hae* and Pledge are simple methods of personal mastery, but it also applies to anything we do or seek to be masters of. Confucian thought emphasizes group good over individual development. Weaving personal mastery and development into larger, shared goals is never easy and in the UM culture the loss

of personal development has meant that for many their growth either just stopped, was only connected to the success of the organization, or they found other outlets.

### **Building Shared Vision**

“The practice of shared vision involved the skills of unearthing shared ‘pictures of the future’ that foster genuine commitment and enrollment rather than compliance. In mastering this discipline, leaders learn the counter productiveness of trying to dictate a vision, no matter how heartfelt.” (Senge)

Father Moon was a master of building a shared vision, but in an attempt to extend this beyond his own lifetime and to future generations, the vision sometimes comes across as “dictated.” It should be noted that Father Moon’s goals were often historical (vertical) in nature and broad in terms of building ideal families through the Blessing. Rev. Moon planted flags of thought relevant to every human endeavor and to nations and cultures throughout the world. The ICUS and PWPA conferences as well as Ocean Church and sending missionaries to virtually every country are good examples of his “flags.” The tools to build those flags into successful enterprises were mostly left to others. His consistent call for people to live for the sake of others brings a shared vision to his followers as well as with people of all faiths.

### **Team Learning**

“How can a team of committed managers with individual IQ’s above 120 have a collective IQ of 63? The discipline of team learning confronts this paradox.” (Senge)

Many organizations, including those within the Unification Movement, suffer from the inability to create a process and atmosphere of learning and improvement that includes everyone. Groupthink and blind adherence to religious dogma inhibit team learning. Smart and well-meaning people end up making very poor decisions. A fundamental requirement of team or organizational learning is to be able to assess what has worked and what has not. One of the lessons from Senge was creating an environment and process where our programs and the assumptions that went into them could be evaluated, without blame. This allowed our organization to learn and foster the type of environment that people willingly invest in.

### **Systems Thinking or Theology?**

Theology can be a means of compliance, but it can also help people deepen their relationship with God, as their organization understands it. It can and does help the individual to see beyond his or her own horizons and allows them to access accumulated wisdom. What systems thinking does that theology does not is it allows the individual to assess their own relationship with the group and their place and role within it.

### **Tools for Family and Relationship Building**

To aid families and individuals in building healthy relationships centered upon God, many resources and thought leaders have been tapped. *Real Love in Marriage* by Dr. Greg Bear is a good example of this. “We try to control people — including our spouses — only because we are empty and afraid; we believe that as we control others we will feel safer and less helpless.” The Divine Principle and teachings of Father Moon emphasize the centrality of marriage, but provide little guidance as to how to achieve this, nor what to do when couples run into trouble. The Blessed Family Ministry department of the FFWPU utilizes a variety of “thought tools” such as those of Greg Bear to enhance the effectiveness of their ministries. These tools do not change the fundamental goals, nor its guiding theology.

### **Conclusion**

So do these new tools replace the Divine Principle or the thought and teaching of True Parents? No. I look at the broader framework that the Divine Principle creates as just that — a framework that the tools I have discussed fit into. With these and other tools, which I am sure others have discovered in their own paths, we are better equipped to build and lead others into a new and better world, centered upon God.

---

*Rob Sayre met the Unification movement in 1973, was blessed in the 1982 Madison Square Garden Blessing of 2,075 couples, and has three children and five grandchildren. He helped start Paragon House Publishers as its first CFO and then worked at Rodale Press, publishers of Men’s Health and Prevention magazines, as business manager for its \$260 million book publishing division. He and his wife, Sally West Sayre (UTS Class of 1981), are one of the founding couples of the Shehaqua Ministries in Pennsylvania, an independent ministry still thriving after 24 years.*
