

## **WFWP Kegu , Togo conference: Innovation and technologies for gender equality**

Sassou Koussougbo

March 11, 2023

As part of the Celebration of the Day of March 8, the WFWP Togo, in collaboration with the IYF association organized a conference on Saturday March 11, 2023 in Kegu . We had 32 participants.

This time, the theme for the event was "For an inclusive digital world: innovation and technologies for gender equality".

Emphasis was placed on waking up our women in society to see who they truly are and also to take advantage of today' technology and the internet to improve their living conditions and help their families. Thanks to social networks, they will be able to do business and earn income.

Through our presentations and lectures, participants were encouraged to take an interest in the digital world specially Internet and also direct their sons and daughters towards scientific studies. The participants understood that their behaviors, the comments made towards their children, spouses and other people are to be controlled because negative words destroy the chance and environment for the goodness to take root and grow.

Also they have been made aware of the real origin of the suffering human beings are facing today. Specially woman must know about the original sin began by Adam and Eve, our ancestors so that they can control and guide their families in right direction. The discovery of the origin of sin can make it possible for all of us to renounce sins and bad behavior and walk in a new path of life toward goodness and true happiness.

Only by taking such a path we will be able to our mind and heart to have a heartistic connection with the origin of life and indeed with all humanity as our brothers and sisters, in one united family in the world.

Our event ended with great joy in a very happy atmosphere.
