

Behind the Scenes

Lilly Gundacker
September 7, 2025

My story starts like this:

Behind the Scenes

That's my next topic. I am acting behind the scenes. I record meetings and upload videos. I have a YouTube channel and created a few more for my areas of interest. I post videos and reports of meetings, events and conferences and have a passion for documentation.

Please continue was my prompt to Copilot.

Copilot

Sometimes, the magic happens not on stage but in the quiet corners where stories are shaped. I find joy in turning raw footage into something meaningful - editing, curating, and sharing not just what happened, but why it mattered. Each upload is a piece of memory preserved, a thread in the tapestry of collective experience. Whether it's a bustling conference or a small gathering, I strive to capture the essence, the unscripted moments that reveal true connection. My channels have become virtual archives, a place where voices, ideas, and moments continue to echo long after the lights have dimmed. For me, documentation is not just a routine task; it's a way to honour the present and inspire the future.

So, even though I rarely edit, curate raw footage into an artful masterpiece, the rest of what Copilot said is true. I am hooked on sharing the amazing events and experiences for posterity.

Blood Moon

I just went out to look at the "blood moon" and caught the first few moments when it looked like a hot air balloon in the sky. And then noticed first just a speck, then a flash, then a streak of light on the lower left side. That was the ongoing eclipse. The moon is recovering its full light and the red moon was just after it rose above the horizon. I thought it was going to get redder but was happy to have caught the very beginning.

My days of camping in the outback are long and gone, but I still know that you get the best view of the night sky where there are no streetlamps or pollution. Out here in the country I saw the stars from our

backyard for really the first time since we moved here. All the planes flying around made we wonder whether they were just there to catch the eclipse. There seemed to be really just too many. The clouds are few, but they also covered the moon for a while. Now it is a normal full moon.

Archiving

Why am I posting this video? I'm discovering Zoom features like share:

- Content only,
- As background,
- Over the shoulder or
- side-by-side.

I'm documenting my progress in archiving historical records, mainly photographs using various cloud storage systems. I've discovered I can use Synology as a SharePoint type private cloud which also gives me the facial recognition features Google offers. I'm expressing my passion for archiving and maintaining historical records to be retrievable for posterity.

Photos

I saw the blood moon

My first try at catching the Blood Moon was thwarted by the flash. The moon rose shortly after sunset and was already blood red when we finally got to see it above the horizon. I kept watching and at first couldn't believe as I saw a speck and then a sliver and then a streak of light as the regular light of the moon was returning. We in fact only caught the second half of the eclipse after the moon was completely covered by the shadow of the earth. When I saw it it looked like a bright round hot air balloon. You can just catch it in my picture. It is almost in the middle, to the left of the last leaf of the twig that goes through the round bush.
